

HYPERLOOP | IN REVIEW

JULY 2026

HYPERLOOP'S EVOLVING LANDSCAPE

FIRST SEMESTER 2026

hyperloop
development
program

1. Preface	3
2. HYPERLOOP development in the first semester of 2026 by month	5
3. Hyper4Rail Progress (January-June 2026)	7
4. Hyperbridge and S3 Partnership	8
5. HyperSafe Safety and Certification for Hyperloop	9
6. New activities in the academic field	11
7. Hyperloop Test Facilities in 2026	12
8. Hyperloop in Policy Making	14
9. Future Outlook	18

The first half of 2026 has been full of news for **Hyperloop** in Europe: **good ones and bad ones!**

- Hardt Global, one of the most important players in technological development, had to declare bankruptcy, showing again that Hyperloop still fails to attract sufficient public and private funds. Therefore, it must be an absolute priority for HDP to help improving the situation.

- Zeleros has been taken over by another Spanish company and will not work on Hyperloop until further notice. With that, two actors have at least temporarily left the ecosystem.

- On the positive side, the Hyper4Rail project financed by Europe's Rail Joint Undertaking is working full speed with a very comprehensive consortium reaching beyond the Hyperloop community and is starting to produce very substantive outputs. The most significant one is a cost-benefit analysis of a high-speed European network connecting the major European agglomerations. The results show a very positive cost-benefit ratio. The study will be published soon.

- Thanks to the financial support of the Netherlands HDP now works with a strong team (presentation of the team in the previous report) and is capable of delivering a much higher level of activity and achievements.

- This has for example allowed to attract the interest of important political representatives to visit Hyperloop facilities and the projected stand at INNOTRANS 2026.

- HDP has also been able to attract large companies as new partners (Outokumpu, Thyssenkrupp Transrapid).

- Two major public events will help to attract more attention to Hyperloop, a stand and an international conference at the INNOTRANS Fair in Berlin in September and a public hearing at the European Parliament on Hyperloop in November.

- The German Government has created a specific unit dedicated to Hyperloop and other innovative transport technologies in the Ministry for Research, Technology and Space and a very good contact has been established between the Hyperloop community and this unit. It will be responsible for financing the projected reference track in Germany. Both the City State of the Free and Hanse City Hamburg and the Free State of Bavaria are actively promoting projects and consortia have been built to respond to a future call. This means that action on Hyperloop may well be focused on Germany in the coming years.

- A consortium of partners of the HDP has been selected in a new call by ERJU for a project on Safety of Hyperloop. This is based on the granting by the European Parliament of a Pilot Action following the request presented by HDP.

1) PREFACE (CONT.)

However, it is fair to say that important challenges remain to be addressed. The amount of public and private funds available for the further development and system integration is far from sufficient. In particular, more efforts are needed to mobilize EU funds from various sources, for example the European Investment Council, the European Investment Bank and Programs like EU-Invest.

Hyperloop is not yet sufficiently recognized in EU and national programs for increased European Innovation and Competitiveness.

In the ongoing negotiations for the next multi-annual financial framework of the EU however, HDP has successfully engaged with the European Parliament in order to anchor Hyperloop better in future EU Programs.

At a wider international level, it is worth noting that successful high-speed testing is now carried out at Swisspod's facility in Colorado, USA.

Sincerely,

Klaus Rudischhauser

2) HYPERLOOP DEVELOPMENT IN THE FIRST SEMESTER OF 2026 BY MONTH

JANUARY

HDP develops a new detailed proposal for funding by the European Commission's Directorate General for Research, Technology and Development of Hyperloop activities and submits it to the European Commissioner Ekaterina Zaharieva.

FEBRUARY

A dedicated **European Summit** takes place on European Industrial Competitiveness. **HDP** sends letters to Commission President Ursula von der Leyen and Italy's Prime Minister Giorgia Meloni asking to add **Hyperloop** to the list of European Industrial sectors able to contribute to competitiveness.

MARCH

HDP established contact with the office of Vice-President Robert De Groot of the European Investment Bank. A first meeting with his services took place in April.

Zeleros is sold to another company and stops working on Hyperloop. Hardt files bankruptcy. However, the possibility of a new start is investigated.

Hyper4Rail Deliverables: On 26 March 2026, **Hyper4Rail** hosted a pre-publication webinar presenting first insights from the European Hyperloop Network Vision, based on research conducted for Deliverable 3.1. The webinar gave stakeholders an early look at how hyperloop could complement Europe's transport system and contribute to a substantial modal shift away from aviation. The presentation was delivered by Mars Geuze, one of the study's authors, focusing on the financial and socio economic case for a European hyperloop network.

APRIL

Kees Mark leaves as a Director of the European Hyperloop Center.

Marinus van der Meijs, one of the co-founders of Hardt has been appointed interim director.

MAY

Vision Paper 2.0: An internal discussion process is organized to build a Vision Paper 2.0 replacing the first paper from December 2024. Meetings are planned in June in Amsterdam and in July during the European **Hyperloop Week** in Veendam.

European Hyperloop Week: HDP takes responsibility for the **European Hyperloop Week** in order to provide a more stable framework and more continuity for the student competition. It is established as a project of HDP.

2) HYPERLOOP DEVELOPMENT IN THE FIRST SEMESTER OF 2026 BY MONTH (CONT.)

MAY (CONT.)

TRA 2026 – Budapest: The Transport Research Arena (TRA) is Europe's largest research and innovation conference on transport, held every two years and bringing together policymakers, industry and the research community to shape the direction of EU transport policy. Its 2026 edition, held in Budapest in May, was therefore one of the most visible platforms in the European calendar for **HDP** to present Hyperloop directly to the audience whose support it most needs.

HDP organised two events at TRA 2026, including a dedicated two-hour Special Session bringing together **HDP**, EuroTube Foundation, IHT Emden/Leer, the European Commission's DG MOVE, and Europe's Rail. Presentations covered Hyperloop's case as a zero-emission "5th mode" for routes of 500–1,500 km, the technical concept and European test infrastructure, DG MOVE's EU fact-finding study, and the innovation and safety agenda coordinated through EU-Rail, including the new Safety Call. A parallel session, presented by Dr. Chrysostomos Mylonas of the Greek

research organization CERTH, sets out headline results of the Hyper4Rail network study: a cost-benefit analysis for a ~11,200 km European backbone network, which shows a very positive cost-benefit ratio.

Coming directly ahead of **INNOTRANS** and the European Parliament hearing later this year, TRA 2026 reinforced **Hyperloop's** standing with the European Commission and the wider research community at a decisive moment for the sector.

JUNE

Hyperloop Conference: Building on five previous editions, **HDP** is joining forces with the conference initiative and will take responsibility for its future organization.

The aim is to broaden its outreach, strengthen engagement with relevant industry stakeholders, and further increase the visibility of the **Hyperloop** ecosystem.

The next **Hyperloop Conference** will be held during **INNOTRANS in Berlin in September**, providing an excellent platform to connect with a wider international audience.

JULY

European Parliament: The European Parliament decides to hold a public hearing on Hyperloop on 4 November. This is a major success of the efforts of **HDP** in the last two years. Work with the Parliament to plan the event has already started.

European Hyperloop Week: The European Hyperloop Week takes place with 23 student teams from Europe, Turkey, India, Canada and China from 13 to 19 July at the EHC in Veendam. **HDP** holds the Annual Assembly, the workshop on the Vision Paper 2.0 and a workshop with German government representatives. Hyper4Rail holds a meeting of its Steering Committee.

3) HYPER4RAIL PROGRESS: JANUARY - JUNE 2026

During the first half of 2026, **Hyper4Rail** was heavily focused on stabilising and restructuring the project following partner and delivery challenges, including amendment preparation, revised timelines, work package gap analyses, budget reallocations, reporting obligations, and discussions with Europe's Rail on project continuation. Significant effort went into aligning technical outputs such as the **Concept of Operations (ConOps)**, system architecture, testing plans, business cases, and the future roadmap, while addressing quality concerns raised by expert reviewers and steering committee members. At the same time, the consortium increased external visibility through the March webinar on the **European Hyperloop Network Vision**, participation in TRA 2026, coordination around broader hyperloop strategy, policy, and lobbying activities.

HYPER4RAIL PROGRESS JANUARY - JUNE 2026

On the technical side, the **Design Concept (WP2)** progressed the design concept through the last of three iterative agreement rounds, finalising the system architecture, Concept of Operations and a Multi-Criteria Analysis of vehicle concepts, converging on a detailed hyperloop concept ahead of the final **Harmonized Hyperloop Concept** deliverable (D2.3). The Technology Validation work package (WP4) is currently working on the subsystem TRL maturity analysis and supplier mapping and engagement, as a basis for the subsequent solution design and prototype validation phases. The Common Industry Roadmap (WP5) produced a first partial draft of the **Draft Hyperloop Roadmap (D5.1)**, with several chapters completed and others in progress pending WP2/WP4 inputs; the submission deadline was revised to September 2026. Work also started on the Hyperloop Demonstration Facility Blueprint and Plan (D5.2) and on the comparative gap-analysis framework for deliverable "Hyper4Rail Results and Recommendations for ERJU Work Programs" (D5.3), using D2.3 as an early baseline.

HYPERBRIDGE

HyperBRIDGE is a cross-border Interreg Deutschland-Nederland project that started in October 2025 and runs to September 2029, with a budget of around €4.8 million. Led by Stichting **European Hyperloop Center**, it brings together SMEs and knowledge institutions including Hochschule Emden/Leer, the University of Groningen, and Hanzehogeschool Groningen. The work is organised around four focus areas: structural health monitoring of infrastructure, communication standards for pod-to-pod communication, an operational control system for hyperloop prototypes, and immersive digital twins for training, maintenance, and prototyping.

In **May 2026** the second consortium meeting took place that marked the shift from set-up to delivery across all work packages. On the technical side, the partners started working on simulations and future sensor placement inside the test facilities to perform measurements. Work on pod-to-pod communication has started by performing research and identifying requirements. The **goTube** has been transformed into a digital twin model that can be explored using **VR/AR technology**. On the strategic and human capital side, serious gaming is being used to make complex business models easier to grasp, and students from **Hanze UAS** presented concrete prototypes and storylines, a tangible result of the education pillar.

In the context of EU regional policy, there are so-called **Thematic Smart Specialization Partnerships (TSSP)**. It is a collaborative network formed under the **European Commission's S3 (Smart Specialization Strategies)** framework. Such platforms connect European regions with shared research and innovation priorities; they explore new industrial value chains across different borders and transform regional strategies into joint commercial and investment projects. This could be a good way for the hyperloop ecosystem to extend and improve the value chain and to apply for funding. In **2025**, the first draft of a specific TSSP for hyperloop was created. The Hyperloop TSSP emerged from cooperation between European regions, industry and research partners from HDP members and partners from other funded projects like **Hyper4Rail** and **HyperBRIDGE**. In April, an expression of interest was submitted to DG Regio, which was positively received. A meeting is now being planned at the end of August to further discuss the hyperloop TSSP.

S3 PARTNERSHIP

5) HYPERSAFE SAFETY AND CERTIFICATION FOR HYPERLOOP

In 2026, the **Europe's Rail Joint Undertaking (EU-Rail)** opened the topic **HORIZON-JU-ER-2026-FA7-01**, "Safety and certification guidelines and demonstration of safety components for hyperloop", the so-called **Safety Call**. The call follows the granting by the **European Parliament of a Pilot Action** based on a request submitted by **HDP** and constitutes the first EU-funded initiative dedicated specifically to hyperloop safety and certification.

The **Safety Call** addresses one of the principal preconditions to the deployment of hyperloop in Europe: the creation of a common safety and certification framework. As a new mode of guided transport based on magnetic levitation and capsule movement within a low-pressure tube, hyperloop must demonstrate a level of safety at least equivalent to established modes such as rail and aviation before it can gain regulatory approval and public acceptance.

The call is structured around two complementary work-streams:

WORK STREAM 1

*Safety and certification guidelines support aims to develop safety guidelines, safety and performance requirements, and a certification roadmap for hyperloop, in close collaboration with **CEN/CLC/JTC 20 "Hyperloop"** and other relevant technical committees. It builds on the results of the **Hyper4Rail** project and covers regulatory requirements, certification procedures, and a common risk-assessment methodology drawing on the safety practices of rail and aviation.*

WORK STREAM 2

*Functional validation of safety components validates key hyperloop technologies at **Technology Readiness Level 4** in a laboratory environment against the requirements defined under **Work-stream 1**. This covers the control command and signaling system, at least two key vehicle components operating under low-pressure conditions, and the passenger exchange interface between vehicle and platform.*

5) HYPERSAFE SAFETY AND CERTIFICATION FOR HYPERLOOP (CONT.)

With an indicative EU contribution of **EUR 3 million**, the call sought to fund a single project combining expertise in hyperloop technology, systems engineering, certification and safety management, and standardization.

HDP is pleased to report that a consortium led by HDP partners has been selected for the **Safety Project**. Evaluators highlighted the soundness of its methodology, the ambition of its objectives, and the strength of its consortium. The project **Hypersafe** is coordinated by the **Technical University of Munich (TUM)** and brings together thirteen partners: TUM, EuroTube Foundation, Neoways Technologies, Hyperloop Italia, TÜV SÜD, Thyssenkrupp Transrapid, the German Aerospace Center (DLR), Hochschule Emden/Leer, HDP, the International Union of Railways (UIC), the European Hyperloop Center, Hardt Group, and Utilities Valves Limited.

Within this consortium, **HDP** is responsible for the communication, dissemination and exploitation of the project's results towards industry, regulators, standardization bodies, and the public throughout the 24-month project. This role places **HDP** at the center of ensuring that the safety evidence generated by **HyperSafe** reaches the audiences that matter most for hyperloop's regulatory recognition and public acceptance across Europe.

HyperSafe builds directly on the results of **Hyper4Rail**, reinforcing the coherence of the European hyperloop research portfolio and paving the way towards the safe certification and future deployment of hyperloop systems in Europe.

6) NEW ACTIVITIES IN THE ACADEMIC FIELD

Alongside project-based research such as **Hyper4Rail** and **HyperSafe**, HDP has begun exploring the **Marie Skłodowska-Curie Actions (MSCA)** under **Horizon Europe** as a further avenue to build long-term academic capacity around **hyperloop**, through the training of doctoral candidates and postdoctoral researchers and the exchange of staff between academic and non-academic partners.

POSTDOCTORAL FELLOWSHIPS (PF)

*HDP has begun identifying possible research themes to propose for a **Postdoctoral Fellowship** application, as a first step towards identifying a suitable host institution and candidate profile ahead of a future call.*

STAFF EXCHANGES (SE)

*HDP is exploring the potential of a **Staff Exchange** to formalise mobility between the academic and non-academic partners of its ecosystem. A number of organisations across the network are being considered as potential participants, with the possibility to involve the **European Hyperloop Week**, whose existing international community of universities and organisations could offer one useful entry point, including the opportunity to involve seconded staff in mentoring student teams. Work is at an early stage, with the broader aim of assembling a consortium that reflects the full breadth of **HDP's academic and industrial partnership**.*

DOCTORAL NETWORKS (DN)

*HDP has started discussions with a number of interested partners with a view to facilitating a future joint discussion and beginning to strategize on how a **Doctoral Network** could be structured around hyperloop-related research. No formal activity has yet been undertaken, but these early exchanges lay the groundwork for a coordinated approach to a future call.*

h 7) HYPERLOOP TEST FACILITIES IN 2026

UNDER CONSTRUCTION

- 10. Chengdu test track (CN)
- 11. DemoTube (CH)
- 12. Transpod test track in Limoges (France)

OPERATIONAL FACILITIES

- 1. European Hyperloop Center (NL)
- 2. goTube test facility (DE)
- 3. ITT Madras test track (IN)
- 4. TUM Hyperloop test track (DE)
- 5. Datong Shanxi test track (CN)
- 6. Nevomo test track (PL)
- 7. Swisspod test track (CH)
- 8. Tubitak (TR)
- 9. Swisspod test track (USA)

PLANNED

- 13. Veneto (IT)
- 14. Reference Track in Germany

EHW

$f_n = 28.22$ Hz

Road and Railway

$f_n = 1.5$ Hz

Forcing Frequency Simulations

Results

Instant Dynamic Relations

The amplified resonant velocity is not heavily affected by resonance, but is dependent on diameter, length, Young's modulus (E), and density (rho).

Steel

h 8) HYPERLOOP IN POLICY MAKING

Over the reporting period, HDP strengthened its engagement with the European institutions, shaping the future framework for research, innovation and industrial competitiveness. While key legislative decisions are still pending, discussion with EU policymakers, particularly in the European Parliament, provide **encouraging indications that hyperloop is gaining recognition** in the context of Horizon Europe FP10 and the proposed European Competitiveness Fund – not only as a future transport technology, but also as an innovation-driven industrial ecosystem with the potential to strengthen Europe's long-term competitiveness.

DEVELOPMENTS AT EU LEVEL

HORIZON EUROPE FP10

The negotiations on **Horizon Europe FP10** have entered a decisive phase. Following the publication of the **European Commission's** proposal, the **European Parliament's rapporteur, Dr. Christian Ehler** has published his draft report. The Council has adopted its partial agreement. **HDP** has actively engaged in the process through exchanges with **Members of the European Parliament**, contributing its policy recommendations and perspectives on the future legal framework for research and innovation.

A particular priority for **HDP** has been the legal anchoring of **European Moonshot Projects** within the **FP10 Regulation**. From **HDP's** perspective, hyperloop represents a prime candidate for such an instrument, given its potential to contribute simultaneously to Europe's competitiveness, technological leadership and sustainable mobility. The Parliament's draft report proposes to anchor **Moonshot Projects** in the legal text, reflecting an approach strongly supported by **HDP**. By contrast, the Council has not included such provisions in its position, making the upcoming trilogue negotiations between the co-legislators particularly important.

Another notable element of the FP10 proposal is the Commission's intention to **support up to 20% of the construction costs of new European research and technology infrastructures**. From **HDP's** perspective, this represents a potentially valuable instrument for financing future hyperloop test and demonstration facilities. Both the Council and the European Parliament appear broadly supportive of this approach, although the Council has proposed additional conditions and financial ceilings. Together with the recently published **European Strategy for Research and Technology Infrastructures**, these developments could significantly improve the framework conditions for future hyperloop test and demonstration facilities in Europe.

8) HYPERLOOP IN POLICY MAKING (CONT.)

DEVELOPMENTS AT EU LEVEL

INSTITUTIONAL ENGAGEMENT

Beyond the legislative process, **HDP** has further deepened its engagement across the European and national policy landscape. During the reporting period, **HDP** held meetings with the **European Commission's Directorate-General for Research and Innovation (DG RTD)**, the **Directorate-General for Mobility and Transport (DG MOVE)**, the **European Investment Bank (EIB)**, **Members of the European Parliament**, and **national authorities**.

The growing recognition of hyperloop, particularly within the **European Parliament**, is also reflected in a number of concrete follow-up initiatives:

- Preparations are underway in the **European Parliament** for a **public hearing on hyperloop in the Transport committee**, currently envisaged for **November 2026** – offering an opportunity to further position hyperloop within the European transport policy debate. **HDP** is in contact with the relevant **MEP** offices regarding potential technical and policy expertise.
- The **Committee on Industry, Research and Energy** of the EP plans to hold a topical debate on **Hyperloop**.
- **HDP** has continued its dialogue with the Cabinet of Commissioner Ekaterina Zaharieva. As part of this ongoing engagement, the **Commissioner for Startups, Research and Innovation has accepted an invitation to visit the Technical University of Munich's hyperloop demonstrator** in September, providing an opportunity to highlight Europe's leadership in hyperloop research and innovation.
- **HDP** is exploring the **organization of a hyperloop conference in Thessaloniki** to further position hyperloop within the European and South-East European transport policy debate. Initial exchanges with the Cabinet of **Commissioner Apostolos Tzitzikostas** have been encouraging, including a positive indication regarding the possible participation of the Commissioner for Sustainable Transport and Tourism.

EUROPEAN INVESTMENT BANK (EIB)

Contact has been established with the office of Vice-President **Robert De Graaf**, who is charge of mobility and a first meeting has been held with his staff.

EUROPEAN INVESTMENT COUNCIL (EIC)

The Chair of the **EIC** has been contacted to draw the attention of **EIC** to the potential of Hyperloop technology.

DEVELOPMENTS AT NATIONAL LEVEL

Germany

Following the **Federal Government's** commitment in the coalition agreement to establish a **Hyperloop** reference track in Germany, the **German Federal Ministry for Research, Technology and Space (BMFTR)** has established a dedicated unit covering **Hyperloop, U-Spaces and Advanced Air Mobility**. This marks an important institutional step towards implementing the Government's commitment. **HDP** continues its close dialogue with the Ministry on the future development of the initiative.

First meetings have taken place with the team of the Ministry during the **European Hyperloop Week** in **Veendam** and **HDP** members have received exploratory visits from the staff of the Ministry.

During the **EHW**, a consensus paper defining minimum requirements for a future reference track has been handed over by **HDP** to the representatives of the Ministry.

It is expected that the Ministry together with the innovation agency **SprinD** will prepare a procedure for tendering a project leading to a reference track in autumn.

Netherlands

The **Ministry of Waterways and Transport** has agreed to support **HDP** financially for **2026 and 2027**. This will ensure that **HDP** can continue and step up its efforts to promote **Hyperloop** at a European level.

Italy

Intense work is going on to ensure the start of the project in the **Veneto region**.

DEVELOPMENTS AT
NATIONAL LEVEL

Turkey

The government supports TÜBİTAK RUTE, and a test facility has been built. Hyperloop-related activities in Turkey are progressing at a steady pace.

India

With strong support from the government, Hyperloop-related activities are progressing steadily, as reflected in the country paper on India recently published by HDP.

China

Significant resources are being invested in Hyperloop development at several competing locations in China. These developments are outlined in the country paper recently published by HDP.

USA

The Swisspod facility in Colorado is nearing completion. It will be the biggest test site so far. Initial test runs have already been carried out successfully at very high speeds with a new pod, Aerys 1.

Canada

Preparatory work on a large-scale project connecting Calgary and Edmonton is progressing. The project is now awaiting confirmation from the Government of Alberta of the regulatory framework required to proceed with a full-scale test track as part of a future operational corridor.

9) FUTURE OUTLOOK

Hyperloop continues to face a difficult situation. Due to lack of funding, not enough development work can currently be carried out by HDP member companies. The most notable development is the start of testing in Swisspod's new facility in the US.

Two companies have suspended work on Hyperloop.

However, there is also good news:

Taken together, all these developments promise to improve the chances for major steps forward in the Hyperloop ecosystem.

With a decision about starting the creation of a reference track in Germany, it can be expected that the attention for Hyperloop both in the political sphere and in the general public will increase significantly. This will provide HDP and its partners with possibilities to better position Hyperloop in the public debate about more sustainable mobility and the creation of an innovative industrial sector. It is also hoped that more large companies and investors will become interested in this new technology.
